

# Dandy Prone Pad™

Provides Comfortable, Flexed Posture in the Prone Position

## The Dandy Prone Pad features:

- 5 sizes to support babies up to 4400 g
- Thickness increases proportionately with each size
- “Goalpost” design minimizes frog-leg posture
- Foam pad is single patient use to prevent cross contamination
- Soft, water-resistant cloth cover (included) may be washed for reuse
- Additional washable or disposable covers sold separately

In hospitalized infants, prone positioning is an appropriate intervention to promote physiologic stability, musculoskeletal and neurological development. Benefits of prone positioning include:

- Improved respiratory status
- Reduced incidence of gastroesophageal reflux
- Reduced stress
- Improved digestion
- Improved bone density resulting from upper- and lower-extremity weight bearing
- Improved duration and quality of sleep

The Dandy Prone Pad facilitates developmentally supportive prone positioning that closely mirrors the fetal flexed posture. With its hourglass shape and unique lower supports (goalposts), the Prone Pad encourages the extremities into midline flexion and guides the knees and hips into proper alignment. With 5 sizes that fit easily into DandleLION positioning aids, it's easy to find the right sized support for every patient.

## Ordering Information

D21531 B12 | Prone Pad w/ 1 cloth cover - XSmall | Qty: 12/case
